## What Are Options?

An option is a contract that gives the buyer the right, but not the obligation, to buy or sell an underlying asset at a specified price on or before a certain date. The buyer of an option pays a premium to the seller of the option in exchange for this right.

There are two types of options: calls and puts.

- A call option gives the buyer the right to buy the underlying asset at a specified price on or before a certain date.
- A put option gives the buyer the right to sell the underlying asset at a specified price on or before a certain date.

## **How Do Options Work?**

When you buy an option, you are essentially buying the right to buy or sell the underlying asset at a specified price on or before a certain date. The price at which you can buy or sell the underlying asset is called the strike price.

The premium that you pay for an option is the price of this right. The premium is determined by a number of factors, including the following:

- The current price of the underlying asset
- The strike price of the option
- The time to expiration of the option
- The volatility of the underlying asset
