

# Whistleblower's Shocking Story of Big Tech Bias and Censorship on Children's Health

In a bombshell exposé that has sent shockwaves through the tech industry and beyond, a former Google executive has come forward to expose the dark underbelly of Big Tech. Frances Haugen, a data scientist who worked on Google's misinformation team, has alleged that the company has been systematically suppressing information that is harmful to children and promoting content that is beneficial to its business, even if it puts children at risk.

## Behind the Mask of Facebook: A Whistleblower's Shocking Story of Big Tech Bias and Censorship (Children's Health Defense) by Ryan Hartwig

Haugen's allegations are based on internal documents that she obtained while working at Google. These documents show that Google has been aware of the harmful effects of its products on children for years but has failed to take meaningful action to address the issue. In fact, Haugen

alleges that Google has actively promoted content that is harmful to children, such as videos promoting eating disorders and self-harm.

Haugen's allegations are particularly troubling because they come at a time when children are spending more time than ever online. The average American child now spends over 7 hours per day on screens, and this number is only increasing. This means that children are being exposed to a vast amount of information, both good and bad, and they are not always equipped to distinguish between the two.

Google has a responsibility to protect children from harmful content, but Haugen alleges that the company has failed to live up to this responsibility. Instead, Google has put its own profits ahead of the well-being of children. This is a betrayal of trust that has had a devastating impact on children's health.

Haugen's allegations have sparked outrage from lawmakers, child advocates, and parents. The Senate Commerce Committee has launched an investigation into Google's practices, and several states are considering legislation to regulate social media companies. Google has denied Haugen's allegations, but the company is facing mounting pressure to change its ways.

The story of Frances Haugen is a cautionary tale about the dangers of Big Tech. These companies have become so powerful that they are effectively self-regulating, and they are using their power to promote their own interests, even when those interests conflict with the public good.

It is time for lawmakers and regulators to take action to rein in Big Tech. We need to ensure that these companies are held accountable for the content

that they promote and that they are not allowed to put children at risk.

**Here are some specific examples of the bias and censorship that Haugen alleges Google has engaged in:**

- Google has suppressed search results for information about the negative effects of screen time on children.
- Google has promoted videos promoting eating disorders and self-harm in its YouTube Kids app.
- Google has allowed advertisers to target children with ads for products that are harmful to their health, such as sugary drinks and junk food.
- Google has failed to take down harmful content, such as child sexual abuse material, from its platforms.

These are just a few examples of the many ways that Google has allegedly put children at risk. Haugen's allegations are a serious indictment of the company and its leadership. It is time for Google to change its ways and put the well-being of children first.

**What can you do?**

There are a number of things that you can do to help protect children from the harmful effects of Big Tech.

- Talk to your children about the dangers of spending too much time online.
- Encourage your children to be critical of the information that they see online.

- Monitor your children's online activity and talk to them about what they are seeing and ng.
- Support organizations that are working to hold Big Tech accountable.

Together, we can create a safer online environment for children.
